FUND OBJECTIVE

The objective of the Flagship IP Worldwide Flexible Fund of Funds is to deliver long term capital growth by investing in a focused portfolio of stringently selected global equity fund managers. Investments, on a see-through basis, will be diversified across geographic regions, in both developed and emerging markets, and diversifies single manager and single style risk associated with investing through one asset manager only. The fund may invest across all asset classes, but, through the cycle, equity exposure will be maintained at around 80%, with the objective to outperform the MSCI World Index (in rands) over the long term (5 years). Our formal benchmark is CPI +5% and the fund is classified in the Worldwide - Multi Asset - Flexible sector.

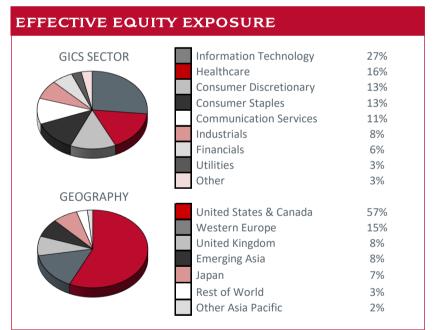

PERFORMANCE AND RISK			
Performance (net of fees)	Fund	Benchmark	Inflation
Since inception	910.4%	449.0%	135.7%
Since inception (annualised)	14.3%	10.4%	5.1%

FUND COMMENTARY ~ JUNE 2020

The fund's longer term outperformance relative to both our internal and external benchmarks is clear to see, but we believe the fund has really demonstrated its true value over the extreme volatile periods around the Global Financial Crisis and the COVID-19 pandemic. To illustrate this, for the six months ending 30 June 2020, the fund has generated a stellar return of +21.7%. This compares very favourably against our formal benchmark return of +3.3%, and against some of our internal benchmarks including the JSE Allshare (-4.8%), the MSCI World Index in rands (+15.5%), and the fund's sector average (+7.6%).

During the month we reduced one of our fund holdings to zero, and invested the proceeds into two of our existing funds, the Artisan Global Discovery Fund and the Mondrian Global Equity Fund.

As required by legislation, we confirm that the fund has adhered to its policy objective and strategy.

MARKET COMMENTARY

International

Efforts to contain the spread of the COVID-19 pandemic have been enormously destructive to global economies, many of which only started to recover in the last few weeks. All major economies are expected to enter recession, with the IMF forecasting a global contraction of 4.9% in 2020.

Markets were dramatically volatile in the first 6 months of 2020. The MSCI All Country World Index (ACWI) fell -21.7% (in US\$) in Q1 before advancing +19.2% in Q2 to end down -6.7% for the 6 months to June 30. While financial markets have recovered from their lows and are continuing to show broad based resilience in the face of poor economic news flow, the sheer volume of fiscal and monetary stimulus is playing a large role in this recovery.

Markets have displayed stoic stubbornness in the face of adverse economic data. Looking in more detail, we have noticed a bifurcation in stock returns per sector: technology companies with sturdy balance sheets, defensive consumer staples, and health care have outperformed, while travel, energy, and credit-exposed financials, among others, continue to suffer.

Like the Global Financial Crisis in 2010, the coronavirus pandemic will long be

remembered for the unprecedented policy responses it elicited from central banks around the world. This concerted policy response has been a key driving force behind the markets rapid recovery.

South Africa

The local economy remains subdued as South Africa struggles to emerge from one of the longest and most brutal lockdowns experienced anywhere on the globe. Virus containment measures are expected to continue to negatively affect the local economy for at least the remainder of the year.

The JSE All Share Index has recovered from its March lows but remains 4% lower than January levels. The Rand has stabilised in the last two months but still trades nearly 21% weaker versus the US\$ year to date.

Government finances continue to deteriorate. The Finance Minister released a supplementary budget that outlined enormous fiscal challenges for the country that could ultimately lead it to default. The Minister did not convincingly address the methods by which the government would prevent a default, except, predictably, higher taxes.

Risk Considerations and Important Information

- · Collective Investment Schemes in Securities (unit trusts) are generally medium to long term investments.
- The value of participatory interests (units) may go down as well as up and past performance is not necessarily a guide to the future. The manager does not provide any guarantee either with respect to the capital or the return of a portfolio.
- · Unit trusts are traded at ruling prices and can engage in scrip lending subject to the limits and conditions imposed by the Act.
- . The manager may borrow up to 10% of the market value of the collective investment scheme portfolio to ensure liquidity.
- Unit trust prices are calculated on a net asset value basis, which is the total value of all assets in the portfolio including any income accruals and less any permissible deductions (brokerage, Uncertificated Securities Tax, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio, divided by the number of units in issue.
- A schedule of fees, charges and maximum commissions is available on request. Commission and incentives may be paid, and if so, are included in the overall costs.
- The unit trust portfolios are priced daily at 15h00 (quarter end 17h00), using forward pricing. Dealing cut-off time is 14h30 daily.
- Units will be repurchased by the manager at the ruling price calculated in accordance with the requirements of the Act and the relevant deeds and paid to the investor only. Subject to occurrences beyond the control of Flagship Asset Management (FAM), transaction requests received by FAM before 14h30 will be actioned at that day's price. Monies from the repurchase of units will not be paid to third party bank accounts.
- FAM reserves the right to repurchase unit balances with a market value less than the minimum monthly investment amount and close the investment account. Investors will be notified beforehand should this be contemplated.
- Portfolio performance is calculated on a NAV to NAV basis and does not take any initial fees into account. Figures quoted are from Reuters and Moneymate for a lump sum using NAV-NAV prices with income distributions reinvested. Income is reinvested on the ex-dividend date. Actual investment performance will differ based on the initial fees applicable, the actual investment date and the date of reinvestment of income. Investment performance calculations are available for verification up request.
- Income distributions for the fund occur bi-annually on 31 March and 30 September.
- Annualised returns are period returns re-scaled to a period of 1 year. This allows investors to compare returns of different assets that they have owned for different lengths of time. Actual annual figures are available to investors upon request.
- SARS requires us to pay over Dividend Withholding Tax (DWT) on your behalf where applicable. We will deduct this tax before we pay any dividends to you or reinvest into your account. Unless we receive information from you indicating otherwise, we will be obliged to withhold the default DWT of 20%.
 The EAC is a standard industry measure which has been introduced to allow you to compare the charges you incur and their impact on the investment returns over specific periods. Please visit
- http://www.ipmc.co.za/effectiveannual-cost to address the EAC illustrator. You can request an EAC calculation from clientservices@ipmc.co.za or call us on 021 673-1340

 Fund prices are published daily and available in newspapers countrywide, as well as on our website, www.flagshipsa.com. Also available on our website is additional information on the unit trust portfolio,
- including our Application Form. FAM reserves the right to only process instructions that are submitted on FAM standard transaction forms.

 Fam: The transaction forms including our Application Form. FAM reserves the right to only process instructions that are submitted on FAM standard transaction forms.

Investment Policy

The Flagship IP Worldwide Flexible Fund of Funds is a Worldwide-Asset Allocation portfolio in the Flexible Portfolio Sector. The primary objective of the portfolio is to offer medium to long-term capital growth. The portfolio will invest in a range of participatory interests in equity, bond, money or property markets, in portfolios of collective investment schemes.

In order to achieve its objective, the investments normally to be included in the Flagship IP Worldwide Flexible Fund of Funds will, apart from assets in liquid form, consist of participatory interests of portfolios of collective investment schemes or other similar schemes, in equity, bond, money or property markets, registered in the Republic of South Africa, or of portfolios of collective investment schemes or other similar schemes operated in territories with a regulatory environment which is to the satisfaction of the Manager and the Trustee, and comply with the requirements of the Act and any regulations thereto.

TER and Transaction Costs

From 1 April 2017 to 31 March 2020 2.40% of the value of the fund was incurred as expenses relating to the administration of the fund. 0.56% of the value of the fund was incurred as costs relating to the buying and selling of the assets underlying the fund. Therefore, 2.96% of the value of the fund was incurred as costs relating to the investment of the fund. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's. Transaction Costs are a necessary cost in administering the fund and impacts fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, the investment decisions of the investment manager and the TER.

Fund Risk Profile

• The investment philosophy is medium to long term in nature but with a conservative bias. The use of several managers diversifies the single-manager and single-style risk associated with investing through one asset manager only. Asset allocation is adjusted according to changes in market conditions..

- Shares are potentially volatile investments and there is a risk of capital loss over the short term.
- Foreign securities may have additional material risks, depending on the specific risks affecting that country, such as: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks; and potential limitations on the availability of market information.
- Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down.
