FUND MANAGER Niall Brown

Launch date	04 May 2005
Fund size	R282m
NAV - A Class	4 270.7c
Sector	South African - Multi Asset - Flexible
Benchmark	Multi-Asset Flexible Sector Average

No. of participatory interests	6 577 993
Minimum lump sum investment	R 10 000
Base currency	ZAR
Income declaration - Mar '21	46.21cpu
Dealing	Daily

FUND OBJECTIVE

The Flagship IP Flexible Value Fund aims to outperform both the JSE All Share Index and competing funds over the medium to long term. We rely on fundamental research to identify investments which are trading at a discount to their intrinsic value and to determine which asset classes are the most attractive. The fund will typically have a very different equity profile from that of the All Share Index. Risk is reduced through the fund's value oriented approach.

FUND COMMENTARY - MARCH 2021

The fund gained 5.3% in March and is up 18% for the first quarter – a good start to the year as small cap value stocks continued to regain favour with investors after many years in the wilderness. This is a global trend which the JSE is following. March's strong showing was primarily driven by gains in selected domestic stocks, while our offshore equities advanced modestly after an extraordinarily strong January and February. We did lock in some gains offshore, and this has increased the fund's cash weighting from a negligible amount to 5.8% - mostly in USD. As indicated in the top ten holdings above, there have been no changes since last month and we remain focussed on small caps; although some, such as Nampak, were certainly not small caps in their heyday! A recent JP Morgan report on small and mid caps globally could not be more bullish. They expect this asset class to "dwarf" the returns of most other asset classes for decades to come! They cite numerous factors including the valuation disparity relative to large caps, faster earnings growth over time, companies that are relatively shielded from protection and populism, a history of out-performance when interest rates are rising and several more besides. Even if they are only half right, a high weighting such as we have in this sub-sector of the market will prove very rewarding, subject, of course, to picking the right stocks. As required by legislation, we confirm that the fund has adhered to its policy objective and strategy.

MARKET COMMENTARY

International

The light at the end of the pandemic tunnel is starting to get brighter. The first quarter of 2021 has ushered in renewed hope of a broad-based recovery across most developed markets. Stock markets have – unsurprisingly – reacted favourably to the positive macroeconomic data, and all global indices are up year-to-date. The MSCI All Country World index, a barometer of global stock markets, has risen +5.2% in USD (+5.6% in ZAR) year-to-date, and over +61.3% in USD (+31.2% in ZAR) over the past twelve months.

Equity valuations remain elevated, with the 12-month forward price-earnings-ratio (or P/E ratio) of the S&P 500 at 23x at the time of writing versus its 30-year average of 17.3x. We have noted that as earnings expectations have increased for 2021, the P/E ratio has declined as share prices have moved sideways in recent months.

Inflation expectations have ticked up. The advent of inflation – and the monetary tightening that follows it – has traditionally been the destroyer of bull markets, so it's logical that market participants would worry about it. Oil (+25% year-to-date) and copper (+16%) are driving inflation, as well as benefitting from it through investor safe haven status.

Stimulus, and the increasing impact of both passive funds and retail investors, are playing a larger role in asset markets. In US equities, passive funds are now roughly as large as the actively managed investment universe after a decade of rampant growth, while retail investors now account for nearly as much as all mutual and hedge fund trading combined.

South Africa

The JSE All Share Index delivered a return of +1.6% in Rands and a +4.4% return in dollars. Despite large gains in the last few months, the JSE has returned a miserly +2.4% per annum in USD over ten year versus +9.7% per annum for the MSCI ACWI. This translates to a total 10-year return of +456.3% over ten years for the MSCI ACWI versus +180.6% for the JSE, both in ZAR.

Vaccine deployment continues at a snail's pace, as do investigations into state capture. Consumers face two massive hits from this month: the first being Eskom's decision to increase electricity tariffs by 15.6% on 1 April 2021, and the second, an increase in the petrol price by as much as R1 a litre, and diesel by 66c. This implies that fuel will now cost R17.32 a litre, comfortably surpassing the previous high of R17.08 set in late 2018.

Risk Considerations and Important Information

- Collective Investment Schemes in Securities (unit trusts) are generally medium to long term investments.
- The value of participatory interests (units) may go down as well as up and past performance is not necessarily a guide to the future. The manager does not provide any guarantee either with respect to the capital or the return of a portfolio.
- Unit trusts are traded at ruling prices and can engage in scrip lending subject to the limits and conditions imposed by the Act.
- The manager may borrow up to 10% of the market value of the collective investment scheme portfolio to ensure liquidity.
- Unit trust prices are calculated on a net asset value basis, which is the total value of all assets in the portfolio including any income accruals and less any permissible deductions (brokerage, Uncertificated Securities Tax, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio, divided by the number of units in issue.
- A schedule of fees, charges and maximum commissions is available on request. Commission and incentives may be paid, and if so, are included in the overall costs.
- The unit trust portfolios are priced daily at 15h00 (quarter end 17h00), using forward pricing. Dealing cut-off time is 14h30 daily.
- Units will be repurchased by the manager at the ruling price calculated in accordance with the requirements of the Act and the relevant deeds and paid to the investor only. Subject to occurrences beyond the control of Flagship Asset Management (FAM), transaction requests received by FAM before 14h30 will be actioned at that day's price. Monies from the repurchase of units will not be paid to third party bank accounts.
- FAM reserves the right to repurchase unit balances with a market value less than the minimum monthly investment amount and close the investment account. Investors will be notified beforehand should this be contemplated.
- Portfolio performance is calculated on a NAV to NAV basis and does not take any initial fees into account. Figures quoted are from Reuters and Moneymate for a lump sum using NAV-NAV prices with income distributions reinvested. Income is reinvested on the ex-dividend date. Actual investment performance will differ based on the initial fees applicable, the actual investment date and the date of reinvestment of income. Investment performance calculations are available for verification upon request.
- Income distributions for the fund occur bi-annually on 31 March and 30 September.
- Annualised returns are period returns re-scaled to a period of 1 year. This allows investors to compare returns of different assets that they have owned for different lengths of time. Actual annual figures are available to investors upon request.
- SARS requires us to pay over Dividend Withholding Tax (DWT) on your behalf where applicable. We will deduct this tax before we pay any dividends to you or reinvest into your account. Unless we receive information from you indicating otherwise, we will be obliged to withhold the default DWT of 20%.
- The EAC is a standard industry measure which has been introduced to allow you to compare the charges you incur and their impact on the investment returns over specific periods. Please visit <http://www.ipmc.co.za/effectiveannual-cost> to address the EAC illustrator. You can request an EAC calculation from clientservices@ipmc.co.za or call us on 021 673-1340
- Fund prices are published daily and available in newspapers countrywide, as well as on our website, www.flagshipsa.com. Also available on our website is additional information on the unit trust portfolio, including our Application Form. FAM reserves the right to only process instructions that are submitted on FAM standard transaction forms.
- Flagship Asset Management (Pty) Ltd is an authorised financial services provider (FSP 577). Trustees / custodians for the scheme are Standard Bank of South Africa Ltd – contact compliance-IP@standardbank.co.za. IP Management Company Reg. No. 2007/01760/07 is the authorised manager of the scheme – contact 021 673 1340 or clientservice@ipmc.co.za. IP Management Company (RF) (Pty) Ltd is a member of the Association for Savings & Investment SA (ASISA).
- The Manager retains full legal responsibility of the Fund, regardless of co-naming arrangements.
- Additional information including the annual report of the Manager and detailed holdings of the portfolio as at the last quarter end are available, free of charge, from info@flagshipsa.com.
- A statement of changes in the composition of the portfolio during the reporting period is available on request.
- Complaints should be in writing and clearly marked for the attention of the Compliance Officer and should be mailed to Private Bag X21, Constantia, 7848.

Investment Policy

The Flagship IP Flexible Value Fund is an asset allocation portfolio. The manager, in selecting securities for the portfolio, will seek to follow an investment policy which will secure for investors an optimum overall return, that is to say the steady growth of income and the preservation of capital in real terms. In order to achieve these main objectives the investments to be acquired for the Flagship IP Flexible Value Fund, shall comprise a mix of securities, which may include ordinary shares, preference shares, debentures, fixed interest instruments, gilts and money market instruments as defined in the Act and the Deed, all to be acquired at a fair market value. The portfolio may also include participatory interests or any other form of participation in portfolios of collective investment schemes or other similar schemes. Where the aforementioned schemes are operated in territories other than in South Africa, participatory interests or any other form of participation in these schemes will be included in the portfolio only where the regulatory environment is to the satisfaction of the manager and trustee and is of sufficient standard to provide investor protection at least equivalent to that in South Africa. The portfolio is permitted to invest in financial instruments in line with the conditions by the Registrar from time to time.

Performance Fees

Performance Fee benchmark:	Median of the Domestic Asset Allocation Flexible Unit Trust Sector		
Base Fees:	1.25% per annum	Fee at Benchmark: 1.25% per annum	Fee Hurdle: Median of the Domestic Asset Allocation Flexible Unit Trust Sector
Sharing Ratio:	10%	Minimum Fee: 1.25% per annum	Maximum Fee: No maximum
Fee Example:	0.1% for each 1% outperformance of portfolio benchmark on a high water mark basis		
Method of Calculating:	If the fund underperforms the Fee Hurdle, then only the base fee is accrued until the high water mark is again reached.		

The Performance Fee Frequently Asked Questions (FAQ) document may be found on www.ipmc.co.za

TER and Transaction Costs

From 1 January 2018 to 31 December 2020, 1.70% of the value of the fund was incurred as expenses relating to the administration of the fund. 0.29% of the value of the fund was incurred as costs relating to the buying and selling of the assets underlying the fund. Therefore 1.99% of the value of the fund was incurred as costs relating to the investment of the fund. Inclusive in the TER of 1.70%, a performance fee of 0% of the Net Asset Value of the class of Financial Product was recovered. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's. Transaction Costs are a necessary cost in administering the fund and impacts fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, the investment decisions of the investment manager and the TER.

Fund Risk Profile

- The fund is likely to have a very different equity profile to that of the All Share Index. Risk is reduced through the fund's value-orientated approach and a larger-than-average number of holdings.

- Shares are potentially volatile investments and there is a risk of capital loss over the short term.
- Foreign securities may have additional material risks, depending on the specific risks affecting that country, such as: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks; and potential limitations on the availability of market information.
- Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down.
