Benchmark	Multi-Asset Flexible Sector Average

No. of participatory interests	6 652 426
Minimum lump sum investment	R 10 000
Base currency	ZAR
Income declaration - Mar '21	46.21cpu
Dealing	Daily

FUND OBJECTIVE

The Flagship IP Flexible Value Fund aims to outperform both the JSE All Share Index and competing funds over the medium to long term. We rely on fundamental research to identify investments which are trading at a discount to their intrinsic value and to determine which asset classes are the most attractive. The fund will typically have a very different equity profile from that of the All Share Index. Risk is reduced through the fund's value oriented approach.

FUND COMMENTARY - JULY 2021

After an exceptional first six months, the fund's offshore equities gave up some ground in July. However, this was more than offset by selected domestic equities where several of the top holdings performed extremely well. The standout was York Timbers (up 51% in July) driven by the emergence of a new activist shareholder which has taken a 17% stake in the company. The new shareholder is A2 Investment Partners, who have recently shaken things up at Novus, leading to a trebling of that share price this year. If they can do even half as well at York, long suffering shareholders will be more than happy. Other notable performers were Nampak (up 18% on a positive trading statement) and Lewis (a 17% return including a dividend). With these three shares already in the top 5 holdings at end June, their strong showing in July provided the impetus for another good month. While the operating businesses owned by the fund have mostly performed strongly this year, the investment holding companies we hold have, on balance, achieved nothing in terms of share price movement. These include African Rainbow Capital, Brait, Ethos, Reinet and Stellar. All trade at abnormally wide discounts and we remain confident that this group will perform well in the next two years as discounts narrow and value is unlocked.

MARKET COMMENTARY

International

The Fed has made it clear that inflation will be allowed to rise in excess of its target before interest rate hikes will be considered. Additionally, the FOMC have committed to slowing their monthly bond purchases, a key support for US government bond yields. We consider both of these negative for US bond prices – and by extension global bond prices. However, with the US debt ceiling reimposed and a slowing of Treasury issuance, US bond yields will likely remain well bid.

China issued the death penalty for its tutoring segment in response to growing concerns about longstanding social pressures such as mounting education expenses for parents and falling birth rates. In response, the share prices of US-listed industry leaders TAL Education, New Oriental Education and Gaotu Techedu have collapsed by about 80% on average. Goldman Sachs has estimated that the restrictions could reduce the industry's annual earnings from \$100bn to less than \$25bn.

We believe that at the heart of the crackdown is an effort to strengthen ideological and practical control over the financial, real estate and education sectors of the economy. In so doing, the State retains the ability to steer the economy in the direction it believes is appropriate for both growth and

desirable socio-economic goals.

For similar reasons, technology companies in China have been scrutinized since the start of the year. We believe that the regulatory process must run its course, and we do not rule out continuing uncertainty into year end.

South Africa

South Africa was gripped by civil strife in July, with KZN declaring a state of disaster due to the extent of damage from the unrest unleashed following the jailing of former president Jacob Zuma. There is no doubt the riots were planned and politically motivated to make SA ungovernable. They largely succeeded, and were prevented only by civilian resistance and the SA Defence Force. The riots are expected to have a R50bn impact on the national GDP, outweighing the windfall SA has experienced from strong commodity prices.

On the positive side, the resource sector continues its spectacular performance ending up 11.8% for July, the highest monthly return since April 2020. As a result of strong commodity prices, the trade surplus in South Africa widened to R57.6bn in June – the highest surplus on record. This technical and temporary phenomenon is all that is supporting the strong Rand in our view.

Risk Considerations and Important Information

- Collective Investment Schemes in Securities (unit trusts) are generally medium to long term investments.
- The value of participatory interests (units) may go down as well as up and past performance is not necessarily a guide to the future. The manager does not provide any guarantee either with respect to the capital or the return of a portfolio.
- Unit trusts are traded at ruling prices and can engage in scrip lending subject to the limits and conditions imposed by the Act.
- The manager may borrow up to 10% of the market value of the collective investment scheme portfolio to ensure liquidity.
- Unit trust prices are calculated on a net asset value basis, which is the total value of all assets in the portfolio including any income accruals and less any permissible deductions (brokerage, Uncertificated Securities Tax, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio, divided by the number of units in issue.
- A schedule of fees, charges and maximum commissions is available on request. Commission and incentives may be paid, and if so, are included in the overall costs.
- The unit trust portfolios are priced daily at 15h00 (quarter end 17h00), using forward pricing. Dealing cut-off time is 14h30 daily.
- Units will be repurchased by the manager at the ruling price calculated in accordance with the requirements of the Act and the relevant deeds and paid to the investor only. Subject to occurrences beyond the control of Flagship Asset Management (FAM), transaction requests received by FAM before 14h30 will be actioned at that day's price. Monies from the repurchase of units will not be paid to third party bank accounts.
- FAM reserves the right to repurchase unit balances with a market value less than the minimum monthly investment amount and close the investment account. Investors will be notified beforehand should this be contemplated.
- Portfolio performance is calculated on a NAV to NAV basis and does not take any initial fees into account. Figures quoted are from Reuters and MoneyMate for a lump sum using NAV-NAV prices with income distributions reinvested. Income is reinvested on the ex-dividend date. Actual investment performance will differ based on the initial fees applicable, the actual investment date and the date of reinvestment of income. Investment performance calculations are available for verification upon request.
- Income distributions for the fund occur bi-annually on 31 March and 30 September.
- Annualised returns are period returns re-scaled to a period of 1 year. This allows investors to compare returns of different assets that they have owned for different lengths of time. Actual annual figures are available to investors upon request.
- SARS requires us to pay over Dividend Withholding Tax (DWT) on your behalf where applicable. We will deduct this tax before we pay any dividends to you or reinvest into your account. Unless we receive information from you indicating otherwise, we will be obliged to withhold the default DWT of 20%.
- The EAC is a standard industry measure which has been introduced to allow you to compare the charges you incur and their impact on the investment returns over specific periods. Please visit <http://www.ipmc.co.za/effectiveannual-cost> to address the EAC illustrator. You can request an EAC calculation from clientservices@ipmc.co.za or call us on 021 673-1340
- Fund prices are published daily and available in newspapers countrywide, as well as on our website, www.flagshipsa.com. Also available on our website is additional information on the unit trust portfolio, including our Application Form. FAM reserves the right to only process instructions that are submitted on FAM standard transaction forms.
- Flagship Asset Management (Pty) Ltd is an authorised financial services provider (FSP 577). Trustees / custodians for the scheme are Standard Bank of South Africa Ltd – contact compliance-IP@standardbank.co.za. IP Management Company Reg. No. 2007/01760/07 is the authorised manager of the scheme – contact 021 673 1340 or clientservice@ipmc.co.za. IP Management Company (RF) (Pty) Ltd is a member of the Association for Savings & Investment SA (ASISA).
- The Manager retains full legal responsibility of the Fund, regardless of co-naming arrangements.
- Additional information including the annual report of the Manager and detailed holdings of the portfolio as at the last quarter end are available, free of charge, from info@flagshipsa.com.
- A statement of changes in the composition of the portfolio during the reporting period is available on request.
- Complaints should be in writing and clearly marked for the attention of the Compliance Officer and should be mailed to Private Bag X21, Constantia, 7848.

Investment Policy

The Flagship IP Flexible Value Fund is an asset allocation portfolio. The manager, in selecting securities for the portfolio, will seek to follow an investment policy which will secure for investors an optimum overall return, that is to say the steady growth of income and the preservation of capital in real terms. In order to achieve these main objectives the investments to be acquired for the Flagship IP Flexible Value Fund, shall comprise a mix of securities, which may include ordinary shares, preference shares, debentures, fixed interest instruments, gilts and money market instruments as defined in the Act and the Deed, all to be acquired at a fair market value. The portfolio may also include participatory interests or any other form of participation in portfolios of collective investment schemes or other similar schemes. Where the aforementioned schemes are operated in territories other than in South Africa, participatory interests or any other form of participation in these schemes will be included in the portfolio only where the regulatory environment is to the satisfaction of the manager and trustee and is of sufficient standard to provide investor protection at least equivalent to that in South Africa. The portfolio is permitted to invest in financial instruments in line with the conditions by the Registrar from time to time.

Performance Fees

Performance Fee benchmark:	Median of the Domestic Asset Allocation Flexible Unit Trust Sector		
Base Fees:	1.25% per annum	Fee at Benchmark: 1.25% per annum	Fee Hurdle: Median of the Domestic Asset Allocation Flexible Unit Trust Sector
Sharing Ratio:	10%	Minimum Fee: 1.25% per annum	Maximum Fee: No maximum
Fee Example:	0.1% for each 1% outperformance of portfolio benchmark on a high water mark basis		
Method of Calculating:	If the fund underperforms the Fee Hurdle, then only the base fee is accrued until the high water mark is again reached.		

The Performance Fee Frequently Asked Questions (FAQ) document may be found on www.ipmc.co.za

TER and Transaction Costs

From 1 April 2018 to 31 March 2021, 1.70% of the value of the fund was incurred as expenses relating to the administration of the fund. 0.28% of the value of the fund was incurred as costs relating to the buying and selling of the assets underlying the fund. Therefore 1.98% of the value of the fund was incurred as costs relating to the investment of the fund. Inclusive in the TER of 1.70%, a performance fee of 0% of the Net Asset Value of the class of Financial Product was recovered. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's. Transaction Costs are a necessary cost in administering the fund and impacts fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, the investment decisions of the investment manager and the TER.

Fund Risk Profile

- The fund is likely to have a very different equity profile to that of the All Share Index. Risk is reduced through the fund's value-orientated approach and a larger-than-average number of holdings.

- Shares are potentially volatile investments and there is a risk of capital loss over the short term.
- Foreign securities may have additional material risks, depending on the specific risks affecting that country, such as: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks; and potential limitations on the availability of market information.
- Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down.
