INVESTMENT OBJECTIVE

The Fund is a multi-asset, globally diversified portfolio investing in equities, bonds, property, and money market instruments without restriction. It does not impose target bands across any of these classes and may deviate materially from its benchmark (50% equities, 30% bonds, and 20% money market). We seek to achieve our investment objective of long-term capital growth with an acceptable level of risk through an actively-managed portfolio of assets, spread over a broad range of asset classes, currencies, and geographies in varying proportions over time. The Fund should be viewed as a medium to long term investment.

FUND MANAGER COMMENTARY - JULY 2024

The Flagship International Flexible Fund returned +0.6% vs its composite benchmark which was up 1.9% (both in USD), during a month in which contradicting economic data led to markets struggling for direction. The fund's composite benchmark return was boosted by the very strong month for global bonds as yields fell on heightened anticipation of multiple Central Bank rate cuts.

The biggest contributor for the month was the Invesco Aerospace and Defense ETF, while the main detractor was the Kraneshares China ETFs.

INVESTMENT COMMENTARY

After months of seemingly plain sailing for US large caps and tech, July saw some volatility being thrown into the mix as earnings season got underway. The S&P 500 dropped 2.3% in a single day, breaking a 365-day streak without a 2% move or greater. Notably, this was the longest such streak since 2007 when the S&P notched a 943-day streak without a >2% move. At month-end, the S&P notched a 1.2% gain, while the Nasdaq declined by 0.7%. The Russell 2000 came roaring back to life with a 10.1% gain. In the UK, the FTSE 100 gained 2.5%, but European shares slipped, with the Euro Stoxx declining by 0.4%. Asian markets struggled, with both Japan's Nikkei and Hong Kong's Hang Seng indices closing in the red.

July delivered a myriad, and often contradicting, set of data points for the market to digest. The Federal Reserve's Jerome Powell initially indicated that inflation data was improving, but would not commit to September rate cuts. This, coupled with robust jobs data (at the time), and very strong US advance GDP numbers (2.8% vs estimates of 2.0%), hinted that the Fed might have

pulled off the ultimate soft-landing. Fast forward two weeks, and cautious commentary on consumer softness, together with weaker than expected US jobs data, threw a spanner in the works of the Fed's Goldilocks-scenario.

Stepping away from economics and into politics, July was basically one, big highlight reel. Joe Biden stubbornly clung to his position as presumptive Democratic nominee and Donald Trump was millimetres away from being assassinated as US politics entered a dark, new era. Biden then relinquished his grip of the Democratic Party, paving the way for VP Kamala Harris to be the new presidential nominee, injecting some life into a particularly dull US Presidential race. In France, the centre-left coalition barely managed to keep Marine le Pen's "Far right" National Rally out of power, while in the UK, the incumbent Conservative Party suffered its worst defeat in more than 130 years as the Labour Party took control of the House of Commons.

TER

The Flagship International Flexible Fund Class A USD has a Total Expense Ratio (TER) of 1.90%. Financial year-end TER 2.00%. The Total Expense Ratios (TERs) are the percentages of the net asset value of the class of the Financial Product incurred as expenses relating to the administration of the Financial Product. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. A current TER may not necessarily be an accurate indication of future TERs. The TER to 31 March 2024 is based on data for the period from 1 April 2021 to 31 March 2024. Cost ratios are calculated using historical actual and/or estimated data and are provided solely as an indication/guide as to the annual expenses/costs that could be incurred. These ratios do not represent any current/actual charges or fees.

Risk Considerations and Important Information

- Collective investments are generally medium to long term investments. The value of units may go down as well as up, and past performance is not necessarily a guide to the future. Investment in the Fund entails risks which are detailed in The Supplement.
- Fund share prices per class are calculated on a net asset value basis, which is the total value of all assets in the portfolio attributable to a share class including any income accruals and less any permissible deductions (such as brokerage, taxation, auditor’s fees, bank charges, director and custodian fees and the annual management fee) from the portfolio, divided by the number of Fund shares of the class in issue.
- Portfolio performance is calculated on a NAV to NAV basis. Dividends will be paid in accordance with the Scheme and Cell Particulars.
- Collective investments are traded at ruling prices. Commission and incentives may be paid. All performance is calculated Total Return, Net of all fees and commissions and in US dollar terms. Forward pricing is used. Up to date Fund prices per share are available on www.bloomberg.com or upon request from the Manager or Administrator.
- Annualised returns are period returns re-scaled to a period of 1 year. This allows investors to compare returns to compare returns of different assets that they have owned for different lengths of time. Actual annual figures are available to investors upon request. Investment performance calculations are available for verification upon request. The performance is calculated for the Fund. The individual investor performance may differ, as a result of various factors, including the actual investment date, the date of reinvestment and dividend withholding tax.
- The Fund may invest in other collective investments, which levy their own charges. This could result in a higher fee structure for the Fund.
- A schedule of fees and charges and maximum commissions is available on request from the Manager.
- Fluctuations in the value of the underlying assets and the income from them and changes in interest rates mean that the value of the Fund and any income arising from it may fall, as well as rise, and is not guaranteed.
- Deductions of charges and expenses mean that you may not get back the amount you invested.
- The fees charged within the Fund and by the managers of the underlying funds are not guaranteed and may change in the future.
- Notwithstanding ongoing monitoring of the underlying assets within the Fund, there can be no assurance that the performance of the Fund will achieve its stated objectives.
- The Fund may contain shares or units in underlying funds that do not permit dealing every day. Investments in such funds will only be realizable on their dealing days. It is not possible to assess the proper market price of these investments other than on the fund’s dealing days.
- No borrowing will be undertaken by the Fund save for the purpose of short term liquidity requirements. Borrowings will not exceed 10% of the NAV of the Fund. For such purpose the securities of the Fund may be pledged. No scrip borrowing will be allowed.
- The Manager has the right to close the Fund to new investors, in order to manage it more efficiently, in accordance with its mandate.
- Investment in the Fund may not be suitable for all investors. Investors should obtain advice from their financial adviser before proceeding with an investment.
- Investors are reminded that any forecasts and/or commentary included in this MDD are not guaranteed to occur, and merely reflect the interpretation of the public information and propriety research available to the Investment Manager at a particular point in time.
- This Report should be read in conjunction with the Scheme Particulars of IPFM Guernsey ICC Limited and the Fund Supplement, in which all fees and fund facts are disclosed.

Fund Risk Profile

- Higher risk investments may be subject to sudden and large falls in value in comparison to other investments. Higher risk investments include, but are not limited to, investments in smaller companies, even in developed markets, investments in emerging markets or single country debt or equity funds and investments in high yield or non-investment grade debt.
- The Fund will contain shares or units in underlying funds that invest internationally. The value of your investment and the income arising from it will therefore be subject to exchange rate fluctuations.
- Foreign securities may have additional material risks, depending on the specific risks affecting that country, such as: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks; and potential limitations on the availability of market information.
